RFID Migration

ALERT Foil Lined Bag Detection

DEFENDER Magnet Detection

Connected EAS Systems

As retailers expand their store portfolio overseas, the ability to remotely connect to an integrated network of EAS systems has never been so important. TAG's portfolio of AM and RF EAS systems can be connected via an in-store LAN to facilitate...

- Full remote service & maintenance, reducing the total cost of ownership and minimising system down-time.
- Full reporting suite including 12 month historical data on all types of alarm activity and customer counting.
- Migration path to RFID

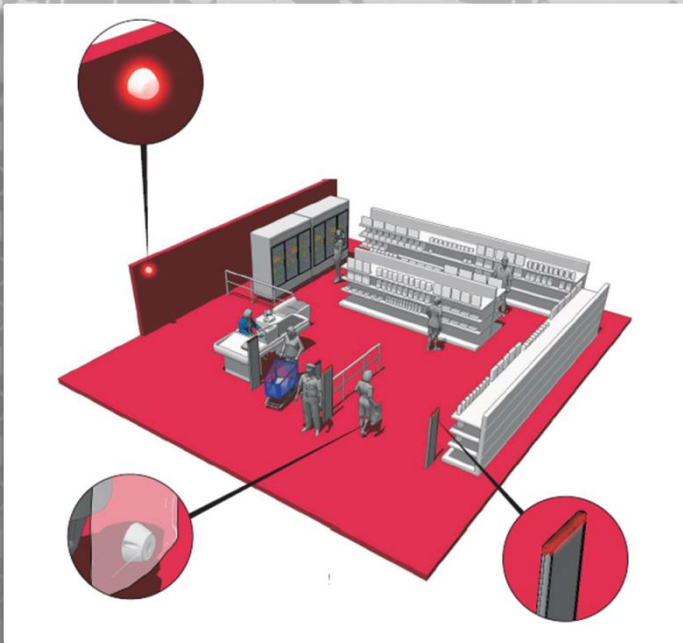

RFID Migration Path

A 3D rendering of a square RFID antenna with multiple concentric copper-colored traces on a white substrate, positioned over a world map background.

RFID is widely viewed as a key technology to transform global retail over the next 10 years. Increased stock visibility facilitates faster stock replenishments of key lines to increase sales.

TAG's range of AM & RF EAS systems can include an integrated RFID antenna, allowing retailers to perform a simple upgrade to operate a dual technology EAS & RFID system.

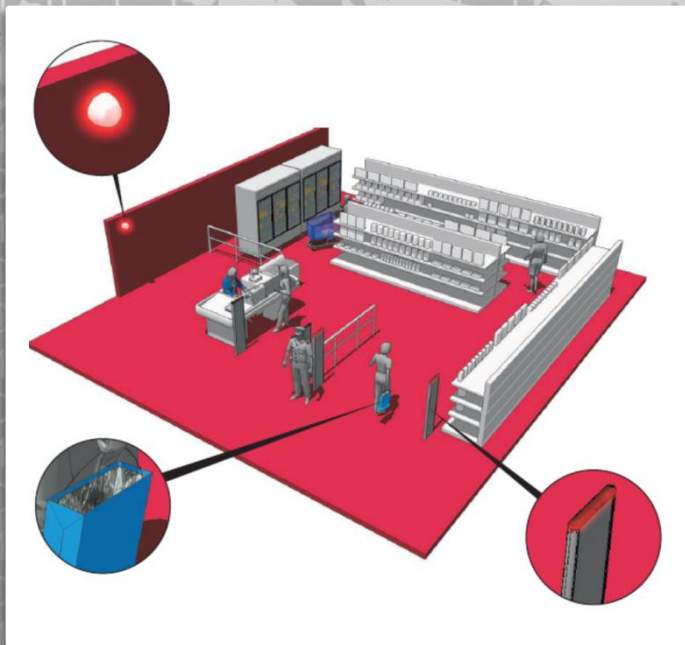

Magnet Detection

Hard Tag Detachers are available to purchase on the internet and leave stores vulnerable to shoplifters entering stores with detachers to release EAS Hard Tags.

TAG's range of AM & RF EAS systems can be installed with DEFENDER technology to alert staff to an incoming magnetic detacher. Staff can be informed via a silent pager or a visual alarm adjacent to the EAS system

Foil Lined Bag / Booster Bag Detection

EAS systems can be defeated by concealing items protected with EAS Hard Tags inside foil-lined bags

Through using the ALERT system, TAG's AM and RF EAS antenna can identify an incoming foil lined bag. Staff can be notified via a silent pager or visual alarm adjacent to the EAS system

About TAG Company

Formed in 2003, TAG has protected over 1 billion products through the application of innovative Electronic Article Surveillance (EAS) Hard Tags and Labels to all merchandise categories within the retail sector including apparel, hard goods and Wines & Spirits.

With a global supply chain including service bureaus in Europe and the Far East, TAG is the trusted provider of EAS solutions to many of the World's leading retailers.
